##### Title

Denver City Council Districts

##### Geospatial Data Presentation Form

vector digital data

### Description

#### Abstract

This layer contains Denver's City Council Districts as they were defined during the redistricting process approved on April 30, 2012. These districts were adopted in 2012 via Ordinance 242; Council Bill 286. This layer also contains records for the at-large candidates (to be consistent with previous City Council District layers). The Denver's City Council districts are effective for the municipal election on May 7, 2015, and for any general or special council election held thereafter. The resulting elected Council District representatives take office; and representation of constituents within the new boundaries begins on July 20, 2015. Newly elected representatives names publish on that date.

#### Purpose

This layer shows Denver's City Council Districts effective for the municipal election on May 7, 2015, and for any general or special council election held thereafter.

## Attribute

### Attribute Label

GLOBALID

### Attribute Definition

A field of type UUID (Universal Unique Identifier) in which values are automatically assigned by the geodatabase when a row is created. The GlobalID field is necessary for maintaining object uniqueness across replicas. All feature classes and tables participating in one-way or two-way replication must contain the GlobalID field. This field is not editable and is automatically populated when it is added for existing data.
