Title

Land Corners

Geospatial Data Presentation Form

vector digital data

Description

Abstract

This dataset contains location and monument data for Public Land Survey System land corners lying within the City and County of Denver, and in selected areas of interest. These corners define the endpoints of PLSS section lines, quarter section lines, and other "aliquot parts" of the PLSS.

Purpose

The purpose of this dataset is to allow users to integrate Public Land Survey System (PLSS) land corner information into engineering plans, proposed projects, etc.

Entity and Attribute Information

Detailed Description

Entity Type

Entity Type Label

land_corners

Attribute

Attribute Label

OBJECTID

Attribute Definition

Internal feature number.

Attribute Definition Source

ESRI

Attribute Domain Values

Unrepresentable Domain

Sequential unique whole numbers that are automatically generated.

Attribute

Attribute Label

SHAPE

Attribute Definition

Feature geometry.

Attribute Definition Source

ESRI

Attribute Domain Values

Unrepresentable Domain

Coordinates defining the features.

Attribute

Attribute Label

CCDPTID

Attribute Definition

An internal index number for all City/County survey control points.

Attribute Definition Source

City and County of Denver Surveyor's Office.

Attribute

Attribute Label

COMMONNAME

Attribute Definition

The name by which the Land Corner is commonly referred. Typically, this will be the Colorado state monument record indexing number reflecting corner classification, PLSS range number (usually 1-5), PLSS township number (usually 66-69), PLSS section number (1-36), and state grid subsection index letter.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

CCDCORNERTYPE

Attribute Definition

An internal classifier used to separate different classes of survey markers in the GIS Parcel Fabric. For this layer, CCDCORNERTYPE will be "Land Corners".

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

MONUMENTTYPE

Attribute Definition

The basic physical appearance of the monument as it appears in the field.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

MONUMENTSOURCE

Attribute Definition

The organization responsible for having set the monument in the field.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

MONUMENTSIZE

Attribute Definition

The physical size of the monument, especially if it is a standard round survey disc or a rebar.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

SURVEYORLICENSENUMBER

Attribute Definition

If available, the Colorado Professional Land Surveyor license number of the surveyor responsible placing the monument in the field.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

MONUMENTPROTECTION

Attribute Definition

Any material or device used to protect a monument from damage or disturbance, such as a concrete pad or cast iron range box.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

SURVEYDATEGPS

Attribute Definition

If available, the date that the monument was measured using Global Positioning System technology.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

SURVEYDATENAV88

Attribute Definition

If available, the date that elevation was established for the monument by differential leveling.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

NAVD88SOURCE

Attribute Definition

If available, the organization responsible for establishing the elevation of the monument by differential leveling.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

GPSSOURCE

Attribute Definition

If available, the organization responsible for establishing the GPS location of the monument.

CORNERPOINTTYPE

Attribute Definition

This field is used to distinguish the several types of PLSS corner types. The CCDCornerType is used to separate different classes of survey markers in the GIS Parcel Fabric.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

ALTERNATENAME

Attribute Definition

Other names by which the land corner may be called other than the Common Name. Typically

this will be the PLSS aliquot description of corner. These descriptions may also contain the following notes: 1. (G) indicates a GIS position only for this point; research is incomplete as to whether this monument represents the actual land corner position. Points described as land corners were described as such in relevant State monument records; the existing monument may or may not represent the actual land corner. 2. (C) indicates a calculated position. Calculated coordinates were derived using range points or reference monuments with direct GPS observations, converting those GPS coordinates to a local system using SKI or Blue Marble Geographic software, calculating coordinates from ground ties to the land corner from State monument records or City range line data, then converting the calculated local coordinates for the unknown point to GPS coordinates using SKI or Blue Marble software. 3. (K) indicates the data was obtained from a consultant or other non-City source; the City has not verified the data, but only provides the information.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

GPSID

Attribute Definition

CCD GPS Point Identifier. Additional information about GPS locations can be found at O:\PWENG\SURVEY\GPS\DATA\CCDGPSAL.XLS. If the value is zero, this point has not been officially GPS'd by CCD personnel.

Attribute Definition Source

City and County of Denver City Surveyor's Office

Attribute

Attribute Label

COORDINATEMETHOD

Attribute Definition

The method by which the monument's GIS XY coordinate location was derived. See ALTERNATENAME for notes relating to coordinate computation methods. 1. (G) indicates a GIS position only for this point; research is incomplete as to whether this monument represents the actual land corner position. Points described as land corners were described as such in relevant State monument records; the existing monument may or may not represent the actual land corner. 2. (C) indicates a calculated position. Calculated coordinates were derived using range points or reference monuments with direct GPS observations, converting those GPS coordinates to a local system using SKI or Blue Marble Geographic software, calculating coordinates from ground ties to the land corner from State monument records or City range line data, then converting the calculated local coordinates for the unknown point to GPS coordinates using SKI or Blue Marble software. 3. (K) indicates the data was obtained from a consultant or other non-City source; the City has not verified the data, but only provides the information.
