Title

Parking Garage and Surface Parking

Edition

2nd

Geospatial Data Presentation Form

vector digital data

Description

Abstract

Originally produced for the 2002 Denver Multi-Modal Access Plan (DMAP), parking areas were on-screen digitized from the City's April 2000 aerial photography. Parking areas digitized only in the DMAP Transit and Pedestrian Study Area. 2012 Update: Additional parking locations were added using the 2012 aerial photography with business license data provided by Excise and License.

Purpose

The parking garage and surface parking datasets were intended to provide city planners, Public Works management, traffic engineers, and Excise and Licenses with information as to parking capacity, parking rates, parking lot locations, and the business licenses file number.

Supplemental Information

This dataset combines the former Parking Garage and Surface Parking layers.

Attribute

Attribute Label
| GlobalID
Attribute Definition
| A field of type UUID (Universal Unique Identifier) in which values are automatically assigned by the geodatabase when a row is created. The GlobalID field is necessary for maintaining object uniqueness across replicas. All feature classes and tables participating in one-way or two-way replication must contain the GlobalID field. This field is not editable and is automatically populated when it is added for existing data.
